The company generates revenues through three main business segments, which are Walmart U.S., Walmart International, and Sam's Club. Specifically, Walmart operates supercenters, supermarkets, warehouse clubs, and eCommerce websites. The main revenue generators from Walmart would include grocery products, including dry grocery products, deli and bakery, frozen foods, and alcoholic and nonalcoholic beverages. In addition, secondary revenue generators are gasoline stations and tobacco sales. From a financial perspective, as of February 2022, Walmart's market capitalization is \$382.7 billion. The organization's beta is .5. A beta below 1.0 indicates that the companies stock is less risky as compared to the overall market. Walmart's current stock price is \$137.99. The organization's current dividend yield is approximately 11.62%. Finally, important competitors for the organization would be Target as well as Amazon.com (2/22). Walmart Financial Report Sources "Walmart 2021 Financial Statements and Financial Ratios: Defined, Discussed, and Analyzed for 5 Years" was written by, Paul Borosky, MBA., doctoral candidate, and owner of Quality Business Plan. In this summarized book, the author researched Walmart's 10k. Walmart's 2017 10k annual report, Walmart's 2021 10k annual report, Walmart's 2020 10k annual report, and Walmart's 2019 10k annual report as the basis for information gathering. Once all Walmart's 10k annual statements were collected, the author then inserted Walmart's income statement information and Walmart's balance sheet information into a customized financial template. In this section, I walk through a broad definition as to what an income statement is and why it is important. From this, I then discuss and define income statement line items, such as revenues, gross profits, etc. in detail. After each line item is defined and discussed, I finally offer a summary analysis of Walmart's important income statement line item trends from 2017 to 2021, in most cases. Revenue Growth: Walmart ended 2017 with revenues at approximately \$485 billion. In the next four years, the organization will continually grow revenues. This growth would result in revenues at \$559 billion in 2021. The organization's growth rate ranged from 6.7% in 2021 to 1.6% in 2019. This would be an average growth rate of 3.6%. An important note to consider is that the firm had above-average growth from 2020 to 2021. A possible reason for this growth would be pandemic-related. As a result, future growth rates may not reach this elevated plateau, especially with competitive pressures from Target and Amazon. Column1 2021 2020 2019 2018 2017 Revenues 124,617 SG&A 116,288 108,791 107,147 106,510 101,853 Depreciation 503,396 492,448 479,906 463,109 EBIT 10,987 10,678 10,529 10,080 R & D 28,615 25,031 Other Income 4,281 4,600 6,204 Net - Interest Expense 1,976 6,670 2,129 2,178 2,267 EBT 22,548 20,568 21,957 26,437 22,764 Taxes 6,858 4,915 4,281 4,600 6,204 Net Income 15,690 15,201 6,670 9,862 13,643 Tax Rate 30.4% 23.9% 19.5% 17.4% 27.3% For Walmart's balance sheet, I again go through each important line item from the balance sheet. In reviewing each line item, I will define the balance sheet line item, such as cash, property, plant and equipment, and liabilities between 2017 to 2021. Next, I then offer an analysis of Walmart's important balance sheet line item. Cash: Walmart's cash position in 2017 was \$6.8 billion. In the next year, the organization's cash position would fall slightly to \$6.7 billion. Fortunately, in the next two years, the organization would enjoy a moderate cash growth ending 2020 at \$9.4 billion. However, in 2021, the organization's cash position would grow substantially, ending the year at \$17.7 billion. The substantial growth in the company's cash position in 2021 may have been in response to the Covid-19 pandemic. Similar to other multinational companies, Walmart may have taken out substantial debt to ensure the firm had liquid resources to sustain operations. If this was the case, then the firm's debt position should have increased substantially as well. Another possibility for the increased cash position would be the firm's stringent reluctance to use short-term investments. If this is the case, it's not a great strategy. A better strategy would be for the organization to identify specifically what their cash needs may be and divest the additional cash into short-term investments. In reviewing each of Walmart's financial ratios, I first start with defining the financial ratio. Next, I supply the financial formula for calculating the specific ratio. Finally, I offer a brief analysis of Walmart's Important Financial ratios. Walmart's current ratio ended in 2017 at .86. The following year, the organization would reduce its current ratio to .76. However, in the next three years, Walmart would increase the current ratio in 2021 to .97. For most organizations, a current ratio below 1.0 may be considered risky from the perspective of liquidity. However, with industries and organizations that continually generate cash on a daily basis, having a current ratio of .8 or lower has become the norm in the last several years. From this perspective, it seems like Walmart actually has a higher current ratio than would be typical for industry competitors. From this, a better strategy may be for the organization to reduce their current ratio by investing in more stores or increasing their dividend payouts. Walmart's Total Asset Turnover: Walmart's total asset turnover in 2017 was 2.44. In the next four years, the organization will continually decrease the total asset turnover ending 2021 at 2.21. Walmart's Debt Ratio: Walmart's debt ratio for 2017 was 21.1%. In the next two years, the organization's debt ratio would slightly increase to 22.8%. However, in the last two years, the organization would take steps to reduce the long-term debt ratio ending 2021 at 16.3%. The substantial reduction in their long-term debt ratio shows that the firm is restructuring its capital structure to include more equity in operations and growth as compared to debt. This type of structure quite frankly confuses me. A better strategy, in my most humble of opinions, would be for the organization to take on more debt, buy back stock, and invest in growth.
